

Some Remarks

(1st AMS Data Model Meeting, CERN, 21 November 2000)

Suggested items for such a meeting might be:

-to focus issues for central processing and handling a large amount of continuously produced data

--needs for redistribution of “master” data

---bandwidth from and to Central facility (LAN & CPU) at CERN

We need an agreement on:

- on the Central Facility at CERN for AMS collaboration
- data access and transfer from CERN
- existence of secondary centers for (regional) redistribution of (part) of data
